EDUCATION

Escuela Da Vinci

Video Game Programming & Design
(2022 – 2026)

Universidad de Buenos Aires

Computer Engineering
(2026 - Expected 3031)

Colegio Cardenal Newman

Secondary Level
(2021)

IELTS Exam

Grade: 8/9
(2021)

PROGRAMMING:

C# (Advanced), C++, GDScript, HLSL, GLSL, HTML, CSS

GAME DEVELOPMENT:

Gameplay Systems, UI/UX, Procedural Generation, Optimization

ENGINES:

Unity, Godot, Unreal

BLAS RICUR

GAMEPLAY PROGRAMMER

Summary

- Gameplay Programmer focused on systems design, UI, and real-time procedural generation.
- Experience building scalable systems including terrain generation, inventory architectures, and ability frameworks.
- Worked in professional environments on production and shipped projects.

EXPERIENCE

Globant Gaming Intern

(2026 - Finished)

- Selected for Globant's gaming division internship
- Training in professional development workflows, code quality, and collaboration practices
- Exposure to international clients and production environments

SSTS Godot Programmer

(2025 - Present)

- Developed gameplay features and UI systems for a mobile game using Godot (GDScript)
- Implemented responsive UI screens integrated with gameplay systems
- Worked with external services including Google APIs for authentication and data flow
- Collaborated in a production environment to iterate on features and improve user experience

Jaguar Games Studio Unity Programmer

(2025 - Finished)

- Developed core gameplay systems with a focus on performance and modularity
- Implemented a custom Marching Cubes terrain system with runtime chunking, enabling real-time terrain modification
- Built a flexible inventory system supporting dynamic item management and extensibility
- Designed and implemented a modular ability system allowing seamless switching between multiple player abilities
- Optimized systems for real-time performance in Unity

Oneblock Minecraft Addon Programmer

(2025 - Finished)

- Developed gameplay features for Minecraft Marketplace add-ons
- Worked within platform constraints to implement scalable and engaging mechanics

Water's Way Down — Unity Programmer

(2024 – Present)

- Designed and implemented core gameplay systems for a complete 2D game
- Built a custom water-based mechanic central to player interaction
- Iterated on gameplay feel, responsiveness, and system balance
- Contributed to a fully completed and shipped product
